501 lbs. plus	.50	.52	.54	.56	.58	.60

NOTE: All prices are quoted F.O.B. our shipping point, with no charge for shipping containers.

Our chestnuts are held in cold storage from the day harvested and are widely acclaimed for planting purposes, with many pounds having been shipped as far as France and Italy. As shipped, the nuts are in proper condition for planting and have been culled of all spoiled or dried nuts. For eating uses it is desirable to cure the nuts further, under cool and airy conditions, until the kernels are spongy. Excessive heat, or drying, or storage in air-tight containers will destroy the nuts for both eating and planting.

For planting, nuts with sound and firm-fresh kernels only should be used. They may be planted in the fall if protected from rodents, but spring planting is most often used. The nuts may be planted either in rows or beds, at 3" to 5" spacings, 2" to 3" deep, and mulched with sawdust or pine-straw, or other available material in order to retain moisture and hold soil temperatures lower and more constant. The Chinese chestnut germinates at quite low temperatures so planting must be timed to prevent frost injury to the tender new sprouts.

The Chinese chestnut is not too particular as to soil types although soils that are slightly acid are preferred. Good drainage is essential to healthy tree growth. Moderate fertilization with commercial mixtures or with organic composts is recommended.

Table use of the Chinese chestnut may be in many forms. Some like the raw nut but most prefer it roasted, boiled, creamed, glazed, or otherwise processed. It is adaptable to all the uses to which the native American chestnut was once applied.

We will be glad to provide such further information as we may have available if you desire it. It will be our pleasure to serve you in every way possible.
